Foreword

As we present the finalized statistics for California Agriculture for 2012, what's foremost in reader's minds is the historic drought we're facing for the coming year. Certainly, our dependence on precipitation has resounded this year like never before: the 2013-2014 winter season in California is the driest on record....

Somewhat reassuring, though, is the important role the agricultural community has served in determining and shepherding a fair and effective state water policy. A previous generation of agricultural producers, along with other great visionaries, deserves credit for developing a water collection, storage and conveyance system based on good stewardship principles that has allowed agriculture and the state's economy to flourish.

For 2012, California's agricultural production value amounted to \$44.7 billion—an increase of \$1.7 billion over the previous year. Exports increased as well—to \$18.18 billion, representing an increase of \$1.41 billion over the previous year!

The bounty and diversity of commodities produced in California make up only a part of the story—California agriculture adapts technology in ways that increase production while conserving resources. This demonstrates leadership in environmentally sustainable practices and lessens impacts on precious resources.

I think we're all reminded now, given the seriousness of the drought affecting us, that we might not always realize year-to-year increases in agricultural production; we're depending on adequate annual precipitation and effective water policy for that. So, let's continue to do our part to not only conserve resources, but let's also remember the essential role of California's agricultural community in building a greater future for all.

To the many who have made this report possible, thank you, and I look forward to partnering with you for this coming year.

Yours truly,

Karen Ross, Secretary
California Department of Food and Agriculture

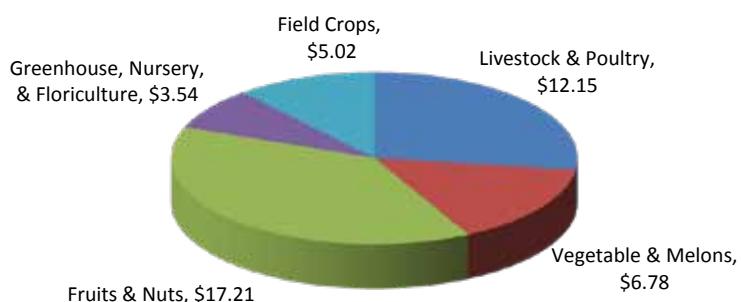

Agricultural Statistical Overview

The sales value generated by California agriculture increased by 3.2 percent between the 2011 and 2012 crop years. The State's 80,500 farms and ranches received a record \$44.7 billion for their output, up from the \$43.3 billion received in 2011. California's increase in revenue was led by the grape industry followed by the cattle sector and almond production, respectively.

Grape production generated \$4.45 billion in cash receipts in 2012, up 15 percent from the previous record high received in 2011. Production was virtually the same, but prices received by growers increased from \$578 per ton of grapes in 2011 to \$666 per ton in 2012. Revenue generated from the cattle sector improved to a record high for the third year in a row as cash receipts were nearly \$3.3 billion for the crop year. Receipts increased nearly 17 percent from 2011 despite production increasing by only 5 percent. Almond cash receipts increased for the third year in a row despite decreased production. Cash receipts increased 8.5 percent due to a rise in prices from \$1.99 per pound of almonds in 2011 to \$2.20 per pound in 2012.

California's Gross Cash Receipts, 2012 \$44.7 Billion*

*Totals may not add due to rounding.

The dairy industry, California's leading commodity in cash receipts, generated \$6.90 billion for milk production in 2012, down 10 percent from the record production of 2011. Milk production increased less than 1 percent, but a drop in prices resulted in an overall reduction in cash receipts for the crop year. Milk prices received by producers fell from \$18.54 per hundred pounds of milk sold in 2011 to \$16.52 in 2012. As the leading dairy producing state in the country, California produced nearly 21 percent of the nation's supply in 2012.

California remained the leading state in cash farm receipts in 2012 with more than 350 commodities representing 11 percent of the U.S. total. California's leading crops remained fruits, nuts and vegetables. Over a third of the country's vegetables and nearly two-thirds of the country's fruits and nuts were produced in California.

Notable Increases in California Cash Receipts:

Olives	149%
Carrots, Processing	83%
Tangerines	77%
Grapes, Table	42%
Pumpkins	40%
Sweet potatoes	32%
Blueberries	32%
Cherries	31%
Sunflower	30%
Peppers, chile	30%

Notable Decreases in California Cash Receipts:

Oats	-28%
Kiwifruit	-27%
Cauliflower	-26%
Pecans	-23%
Catfish	-22%
Honey	-22%
Lettuce, Head	-22%
Garlic	-21%
Spinach, Processing	-19%
Asparagus	-16%

Farm Facts

In 2012, 80,500 farms operated in California, 1,000 less than in 2011 but still 3.7 percent of the national total. Nearly 24 percent of California farms generated commodity sales over \$100,000, slightly greater than the national average of 18 percent. The amount of land devoted to farming and ranching in California remained constant at 25.4 million acres for the sixth consecutive year. The average farm size increased from 312 acres to 316, which is below the national average of 421 acres.

Land Values/Cash Rents

The average value of California farm real estate increased 4.3 percent in 2012 to \$7,200 per acre. Irrigated cropland's value increased 4.3 percent to \$12,000 per acre and non-irrigated cropland decreased in value for the first time in three years by 1.4 percent. The value of all cropland increased 3.8 percent to \$9,810. The value of pastureland remained constant at the 2011 level of \$2,800 per acre.

The rental rate of irrigated cropland increased slightly to \$340 per acre, up from \$335 per acre in 2011. Non-irrigated rental rates decreased by 20 percent to \$40 per acre, down from \$50 per acre in 2011. Pastureland rental rates also decreased from 2012 rental rates, down to \$11.50 per acre in 2012 from \$12.50 in 2011.

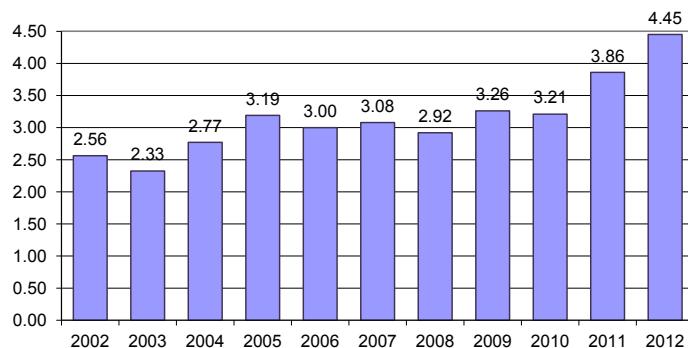

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$36.4 billion in value in 2012. Eleven commodities exceeded \$1 billion in value in 2012. The cash receipts of thirteen of the top twenty commodities increased in value between 2011 and 2012. The growth in the cash receipts of grapes overshadowed that of almonds as grapes became the second leading revenue-generating commodity in California. Grower returns are subject to change and could result in an updated dollar amount in next year's report.

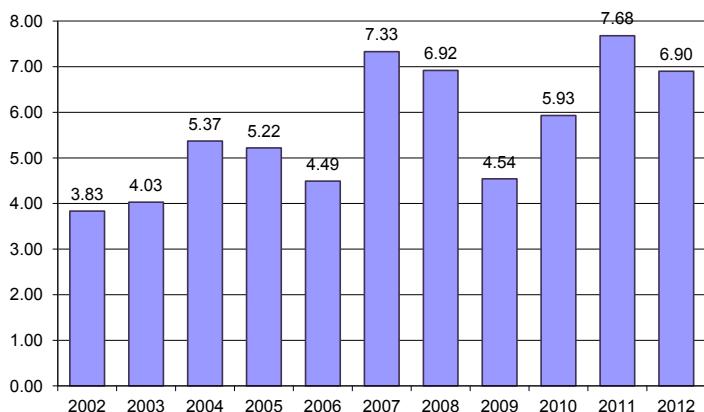

Weather Highlights for 2012

The year began with mild temperatures across Northern California as well as the Central Valley. The first major weather event was a Pacific storm system along the far Northern Coast that created a surface high pressure cell over the Great Basin. Dry conditions throughout the State delayed planting of

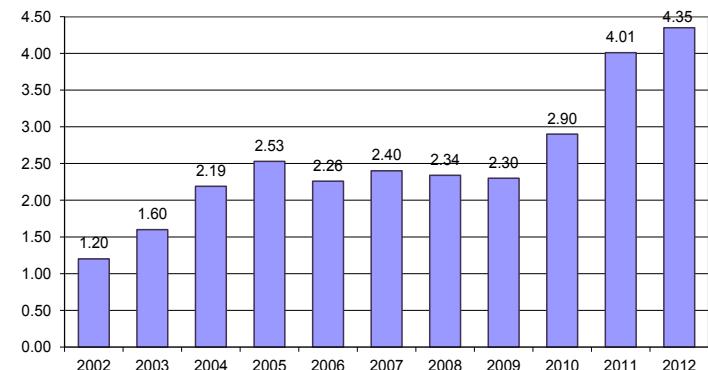

All Grapes Cash Receipts, 2002-2012 Billion Dollars

Milk Cash Receipts, 2002-2012 Billion Dollars

Almond Cash Receipts, 2002-2012 Billion Dollars

wheat and oats, however, as farmers waited for more precipitation. Pasture and range conditions were also poor throughout the month due to a lack of moisture. January ended on a dry note as high pressure from the south brought dry and warm conditions to all of the State with the exception of the North Coast. February was characterized by similar conditions as low pressure systems from the Gulf of Alaska pushed cold fronts through far northern California and spread

showers over the entire State. Despite the active cold fronts moving through the State, measurable precipitation was far below seasonal normal levels. Range and pasture conditions remained poor and many growers noted delayed progress for field crops due to a lack of rain. A high pressure ridge developed over California at the end of month and gave way to warm and dry conditions.

Top 20 Commodities for 2010-2012

Source: Summary of California County Agricultural Commissioners' Reports

A cold front and associated low pressure system moved across Northern California at the beginning of March and resulted in light showers and cooler temperature. There was a brief period of mild conditions, but a fast moving cold front pushed through the State and spread showers across Northern California. Dryland grain and pasture conditions in the North improved with the precipitation, but fruit and vegetable growers from the Central Valley to Southern California were forced to irrigate due to the lack of rain. The north-south front moved eastward gradually and brought rainfall to Southern California during the last week of March. The widespread rain

eastward, high pressure built over the southland and resulted in a drying and warming trend for the State. This pattern of low pressure entering California from the North Coast followed by building high pressure continued through the end of April. Temperatures in the Central Valley hovered 10-20 degrees above normal during late April which aided wheat maturation progress. May saw a reversal in weather patterns as diminishing high pressure brought warm weather to Northern California as Southern California experienced cool, moist conditions due to a strong onshore flow. This warming trend in the North accelerated progress for grape and kiwi vines. May ended with a low pressure system from British Columbia driving southward and bringing cooler temperatures and limited precipitation.

Top 5 Agricultural States in Cash Receipts, 2012

State	Rank	Total Value Billion Dollars
California	1	44.7
Iowa	2	31.9
Nebraska	3	24.4
Texas	4	22.7
Minnesota	5	20.5

Crop and Livestock Commodities in which California Leads the Nation ¹

Eggplant	Limes	Pistachios	

¹ California is the sole producer (99 percent or more) of the commodities in **bold**.

² Includes tangelos, tangerines and tangors.

temperatures mild in the southern coastal region. The dry and warm conditions aided in the development of field crops and vegetables but resulted in deterioration of rangeland and pasture. Temperatures in the Imperial and Central Valleys remained above normal through the end of June. July began with a State wide warming trend that resulted in above normal temperatures from Southern California to the northern Central Valley. This slowed the development of fruits and deteriorated rangeland and pasture conditions. A monsoonal flow of moisture from Baja California characterized the end of July as precipitation was observed across the Southland up to the Central Valley and into the Sierra Nevada mountains.

As the monsoonal flow exited California at the end of July, high pressure settled in its wake and brought above normal temperatures to the State at the beginning of August. Temperatures remained above normal and aided in the development of many field crops but deteriorated pasture conditions. As the month progressed, isolated thunderstorms occurred from the Imperial Valley up through the Sierra Nevadas into the Lake Tahoe region. Thunderstorm activity and gusty winds characterized the end of August. Mild temperatures in Northern California brought about the beginning of September as temperatures reached triple digits in Southern California. Conditions were ideal for drying corn for grain and grapes for raisins, but further deteriorated pasture and rangeland. Moisture from the South combined with the high pressure system, resulting in scattered thunderstorms and cooler temperatures throughout the State. With the exception of some gusty winds and periods of slightly cooler temperatures brought on by a low pressure system from the Pacific Northwest, conditions were warm and dry through the end of the month.

From the end of September through the first week of October, temperatures remained high across interior California. A low pressure system eventually moved in from the North Coast and brought rain, cooler air and thunderstorm activity to the Bay Area and Central Coast as it slid southward toward Southern California. The rain event allowed farmers to plant small grains and improved rangeland conditions. A high pressure system developed in the place of

the exiting low and brought dry and mild weather for roughly a week. Relief came in the form of remnants of Hurricane Paul as higher humidity and showers spread across the Southland. The end of October was characterized by widespread precipitation and thunderstorm activity that moved through the State from the Gulf of Alaska.

Warm and dry conditions characterized the first weeks of November until a low pressure system from the Gulf of Alaska swept through California during the middle of the month. As a result, precipitation spread across the State as well as the first frost of the year to interior Northern California. The precipitation increased soil moisture and aided in the development of small grains as well as improving rangeland conditions. The remainder of the month alternated between a dry atmosphere and an ensuing low pressure system that brought widespread rain. December began with warm and wet storms across Northern California and light precipitation to the South. Around the middle of the month, a cold front entered California and brought moderate precipitation. Although the rain delayed pruning and weeding for fruit growers, it was extremely beneficial to the development of vegetables and small grains. December ended with strong storms pushing through the West Coast. As many as three storms moved across California and brought precipitation to close out the year.

Global Marketplace

California continues to set the pace for the rest of the nation as the country's largest agricultural producer and exporter. In dollar terms, California's agricultural exports reached a record-breaking \$18.18 billion for 2012.

Significantly, California is the nation's sole exporter of many agricultural commodities, supplying 99 percent or more of the following: almonds, artichokes, dates, figs, grapes (raisins), kiwifruit, olives, peaches (Clingstone), pistachios, plums (dried), pomegranates, rice (sweet), seed (Ladino Clover), and walnuts.

California's agricultural export values have realized tremendous gains in the past decade. While 2012 showed a gain of approximately 8 percent from the year before, on average, California's agricultural exports have grown at an impressive rate for the past 10 years, except for a slight contraction between 2008 and 2009.

California's Top 10 Agricultural Export Markets, 2012

Rank	Country	Export Value Millions	Leading Exports
1	Canada	3,149	Wine, Lettuce, Strawberries

¹ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

¹ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

² Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

³ Based on total value.

⁴ Based on values published in the county agricultural commissioners' annual crop reports. 2011 crop year data used when 2012 not available.

⁵ Share of U.S. production based on 2007 Census of Agriculture

⁶ From Economic Research Service cash receipts data.

⁷ Includes sunflower and safflower.

⁸ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

⁹ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.

D - Withheld to avoid disclosing data for individual operations.

* Based on 2012 production multiplied by 2011 price.

County Statistical Data

California's counties reported an increase of 7.3 percent in the value of their agricultural production for 2012. Six counties reported agricultural production exceeding \$3.0 billion each. Fourteen counties reported a value of production in excess of \$1.0 billion. Fresno continued as the leading county with an agricultural production value of \$6.59 billion, a decrease of 3.3 percent from the 2011 value. Kern County was second in value of production with \$6.21 billion, an 11 percent increase from 2011. Tulare County fell to third in value, even with an increase of 10.3 percent in production to \$6.21 billion. Monterey remained fourth in value with \$3.14 billion, a 7.4 percent increase from 2011.

Notes to the Agricultural Commissioners' Data

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm where it is produced. Values placed on pasture and range feed are included and fresh fruit and vegetable crop values are based on the Free-On-Board (F.O.B.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The California County Agricultural Commissioners' Reports publication also provides statistics on a broader range of commodities than estimates prepared by other agencies.

Highlights of County Ranks and State Totals, 2012

Rank	Commodity	County Rankings
1	Grapes (All)	Kern overtakes Fresno, followed by Tulare
2	Milk and Cream	Tulare leads again with close to 27 percent of the State total
3	Almonds	Fresno continues to lead, with Kern and Stanislaus not far behind
4	Cattle & Calves (All)	Tulare is No. 1, followed by Imperial and Kern
5	Nursery Products	San Diego continues to lead with 24 percent of the State total
6	Berries, Strawberries	Monterey and Ventura lead with close to 62 percent of the total
7	Lettuce	Monterey leads with over 68 percent, Imperial follows with 13 percent
9	Alfalfa Hay	Imperial takes the lead with almost 14 percent, closely followed by Kern
10	Pistachios	Kern leads with more than 40 percent of the total
11	Oranges	Tulare leads with a little over half the State total
12	Chickens	Fresno leads with over 53 percent, Merced follows with almost 25 percent
13	Silage, All	Tulare holds over 32 percent of the total
14	Tomatoes (Processing)	Fresno leads with over 36 percent, followed by Kings and Yolo
15	Rice (Excl. Seed)	Colusa leads with 28 percent of the total, followed by Sutter at almost 19 percent

California's Leading Timber Counties, 2012¹

Timber Rank	County	Timber Volume Million Bd. Ft.	Total Agricultural Value (Including Timber)	Timber Value \$1,000	Timber Percentage of Total Agricultural Value Within County Percent
			\$1,000		
1	Humboldt	221,617	236,979	62,557	26.4
2	Shasta	185,799	129,865	36,931	28.4
3	Siskiyou	144,874	388,768	30,768	7.9
4	Mendocino	121,850	173,904	28,940	16.6
5	Plumas	84,652	38,415	13,669	35.6

¹ Timber volume and value data are from the State Board of Equalization, Timber Tax Division.

Because of these concepts, the State total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service, Pacific Region-California. The larger total value reported by Agricultural Commissioners results from the different definitions used in estimating total value of production rather than cash receipts to producers.

Some counties include timber as a part of their crop report, following the pattern set by the California County Agricultural Commissioners and Sealers Association (CACASA). Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. The total 2012 value of production reported by the counties, including timber, is \$55.7 billion, up 7.3 percent from last year. At \$62.6 million, Humboldt

County leads the State with 23.4 percent of the State's total timber value.

County Agricultural Commissioners' Reports

Copies of individual County Agricultural Commissioners' Reports may be requested or obtained directly from each County Agricultural Commissioner's Office. For your convenience, a listing is included at the end of this report. Many of the counties publish the reports on their websites free-of-charge.

USDA's National Agricultural Statistics Service, Pacific Regional Office publications are available free-of-charge on the internet at:
www.nass.usda.gov/ca.

Field Crops

The total value of California field crop production decreased to \$5.43 billion, down 7.95 percent from 2011. Alfalfa, Cotton and Rice had a large impact on California's field crop totals in 2012. In what otherwise would have been a static year for total field crop value, the large decrease in these values led to the decrease in total field crop value.

Cotton acreage and value decreased for 2012. The price of Upland cotton was \$0.91 per pound, down 12 percent from 2011. The total value of Upland cotton decreased from \$278 million in 2011 to \$213 million in 2012, a decrease of 23 percent. California growers planted 225 thousand acres of American Pima cotton, down 49.0 thousand from 2011. The American Pima cotton price decreased from \$1.45 to \$1.24 per pound in 2012. This resulted in the value of American Pima cotton decreasing from \$546 million in 2011 to \$437 million in 2012.

In 2012, California produced approximately 6.56 million tons of alfalfa hay, valued at \$1.38 billion. Production of hay other than alfalfa increased 13 percent, while its total value increased 20 percent. Total hay production increased 9 percent from 2011. The increased acreage and production for all hay offset the lower hay prices, resulting in hay's value remaining virtually unchanged.

Rice plantings decreased by 4 percent, with 561 thousand acres planted in 2012. Medium grain rice contributed to 89 percent of the total rice acreage and 91 percent of the total production. Acres planted and harvested decreased, as well as production and price. The total value of rice production was \$771 million, a decline of 14 percent from the previous year.

California corn for grain production was valued at \$235 million for 2012, a 32 percent increase from 2011. Harvested acreage and price increased from the previous year and yield remained unchanged. Harvested acreage increased 20 percent to 180 thousand acres while price increased by 10 percent. Harvested acres of corn silage decreased by 11 percent to 425 thousand acres. Production of corn silage decreased to 11.3 million tons, down 9 percent from 2011.

Fifty-nine percent of the California wheat crop was harvested for grain in 2012. Wheat was planted on 750 thousand acres and 445 thousand were harvested for grain. Overall, production decreased 16 percent and value decreased 6 percent. The production of winter wheat decreased 26 percent from 2011, while Durum wheat production increased 13 percent from 2011. The value of all wheat production decreased 6 percent to \$337 million.

Notable Increases in Value:

Sunflower, Oil	56%
Oats	52%
Sunflower, All	46%
Corn, Grain	32%
Potatoes, Sweet	32%

Notable Decreases in Value:

Corn, Silage.....	-30%
Sunflower, Non-Oil.....	-25%
Cotton, Upland.....	-23%
Potatoes, Fall.....	-22%

¹ Area planted includes preceding fall.

² Production is on a clean basis.

³ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.

⁵ Planted acreage is for all purposes.

⁶ Production ginned. Cotton bales are 480 lbs. net-weight.

⁷ Estimates began in 2005.

⁸ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

⁹ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

¹⁰ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

¹¹ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

¹² Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

¹³ Sweet rice acreage has been included since the 2003 crop year, but not previous years.

¹⁴ Excludes wild rice.

¹⁵ Estimates began in 2000.

¹⁶ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

¹⁷ Preliminary Marketing Year Average Price.

¹⁸ Value derived from Minor Commodities Cash Receipts and updated with previous County Agricultural Commissioner data.

¹⁹ Beginning in 2010, winter and summer estimates included in spring total.

Floriculture

California's floriculture crop leads the nation with a value of \$974 million in sales, for operations with more than \$100,000 in sales, comprising 24.4 percent of the U.S. total wholesale value. Sales slightly decreased 3 percent from the 2011 total. California producers decreased from 384 in 2011 to 371 in 2012.

For operations with more than \$100,000 in sales, California accounted for 16 percent of the total value of Total Bedding and Garden plants, the highest-valued crop category in the 15-state program. The wholesale value of California-grown bedding and garden plants at \$306 million in 2012 was virtually unchanged from 2011.

California also leads the country in potted flowering plant value for 2012, with a total value of \$245 million wholesale, up less than one percent from the 2011 valuation. California accounted for 40 percent of the 15-state total wholesale value reported.

California was the dominant state in cut flower production, accounting for about 76 percent of the total cut flower wholesale value. The \$261 million in value for 2012 was down 6 percent from the 2011 valuation of \$278 million.

Fruit and Nut Crops

California accounts for 65 percent of the U.S. non-citrus fruit and nut production and 73 percent of the national value. Of the citrus crops, California accounts for 30 percent of the U.S. citrus production and 42 percent of the national value. In total, the state produced 16.7 million tons of fruit and nuts, 52 percent of the national total, up 1 percent from 2011. The state's total value of all fruits and nuts in 2012 was \$18.7 billion, up 20 percent from 2011.

In 2011, for the first time ever, almonds overtook grapes as the top valued fruit and nut crop in California. In 2012, grapes came back and reclaimed their number one spot, topping \$5 billion in production value. Almonds were a close second at over \$4.8 billion. California grapes accounted for over 90 percent of the United States utilized grape production in 2012. California is the top raisin producer in the world. Crops with record California production in 2012 were mandarins, pistachios, strawberries, and wine grapes. California accounted for all or nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

According to the USDA's Economic Research Service, California continued to be the number one exporter of agricultural commodities in the United States in 2012. Tree nuts were the number one agricultural export for California, followed by fruit and vegetables. Fruit and nut exports accounted for over 50 percent of the value of all California agricultural exports.

The United States is among the top producers and consumers of fruit and tree nuts in the world. The typical American consumes around 286 pounds of fruit and tree nuts (fresh and processed products) each year. Oranges, grapes, apples, and bananas

are the most popular fruit while almonds, walnuts, and pecans are the most preferred tree nuts. Per capita consumption of fruits and tree nuts is the third-largest among major food groups, after dairy products and vegetables.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage in the country.

The value of U.S. tree nut production in 2012 was over \$7 billion in value, with almonds, walnuts, pistachios and pecans accounting for most of the sales. California is the nation's number one producer of tree nuts. For almonds and pistachios, California is the number one producer in the world, producing over 80 percent of the world's almonds and around 40 percent of the world's pistachios. Almonds are close to \$5 billion per year in value, pistachios were well over \$1 billion, while walnuts were over \$1.5 billion for the first time in 2012. Over 90 percent of the U.S. tree nut production was harvested from Golden State orchards in 2012.

Notable Increases in California Production:

Olives.....	125%
Avocados.....	53%
Cherries, Sweet.....	36%
Pecans.....	30%
Pistachios.....	24%
Grapes, Wine.....	20%

Notable Decreases in California Production:

Plums.....	28%
Kiwifruit.....	21%
Nectarines	17%
Grapes, Raisin	16%

¹ Non-bearing shown only in year when acreage surveys were conducted.

² Return at processing plant door or packinghouse door.

³ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1998-2000 - zero; 2001 - 41,000; 2002 - 27,000; 2003-2010 - zero. These acres were deducted from bearing acres before calculating yield.

⁴ Production is the fresh equivalent of dried and not dried.

⁵ Acreage by county, variety and year of planting for 2007 are available upon request.

⁶ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

¹ Missing data not published to avoid possible disclosure of individual operations.

² Total processed includes canned, frozen, juice, and brined.

³ Small quantities processed included in fresh to avoid possible disclosure.

⁴ Includes substandard raisins diverted to other uses.

⁵ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

⁶ Quantity and value include dried, but price excludes dried.

⁷ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure. Data for 2006 and 2007 not published to avoid possible disclosure.

⁸ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

¹ Non-bearing shown only in year when acreage survey conducted.

² Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value:

2002 - 8.30 million lbs, 2003 - 20.8 million lbs, 2004 - 14.5 million lbs, 2005 - 16.1 million lbs, 2006 - 23.5 million lbs, 2007 - 17.5 million lbs, 2008 - 14.0 million lbs, 2009 - 20.0 million lbs, 2010 - 18.0 million lbs, 2011 - 16.0 million lbs, 2012 - 23.0 million lbs.

³ For 2012, Production and value of production are based on Almond Board of California receipts from handlers.

⁴ For 2012, Production based on California Walnut Board receipts from handlers. Price is based on the Walnut Raisin Prune Report released November 2013. Value was calculated based on production and price.

Grape Crush

Grape Crush Grape Overview

Information contained in this report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Final Grape Crush Report includes all grape tonnage crushed during the 2012 season. Changes in tonnage, Brix and prices from the preliminary report to this final report were due to late reports and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code.

Summary of Grape Tonnages and Prices

The 2012 crush totaled a record high 4,387,434 tons, up 13 percent from the 2011 crush of 3,874,158 tons, and 1 percent larger than the previous record high 2005 crush. Red wine varieties accounted for the largest share of all grapes crushed, at 2,292,483 tons, up 19 percent from 2011. The 2012 white wine variety crush totaled 1,725,754 tons, up 21 percent from 2011. Tons crushed of raisin type varieties totaled 270,085, down 28 percent from 2011, and tons crushed of table-type varieties totaled 99,111, down 36 percent from 2011. (See chart)

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2012 season, this total was 528,742 tons, 12 percent of the 2012 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

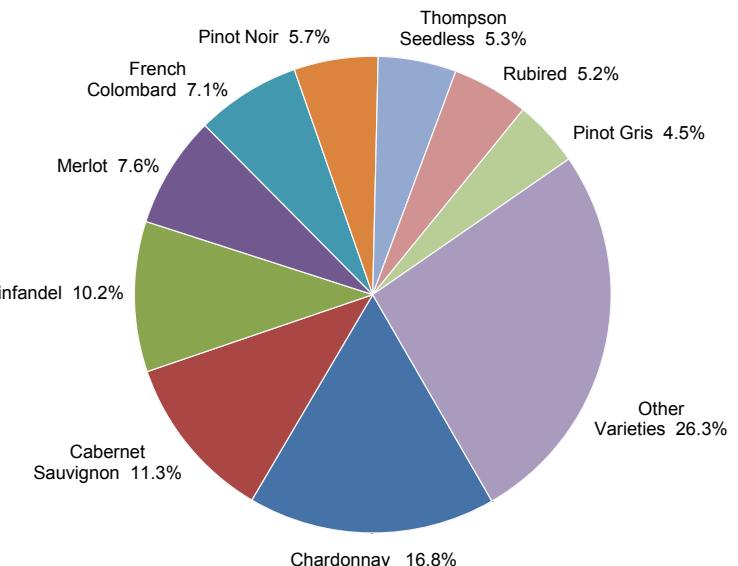

The 2012 average price of all varieties reached a record high of \$737.76, up 25 percent from 2011. Average prices for the 2012 crop by type were as follows: red wine grapes, \$883.88, up 25 percent from 2011; white wine grapes, \$625.32, up 15 percent from 2011; raisin grapes, \$318.62, up 20 percent; and table grapes, \$272.21, up 24 percent.

Leading Grape Varieties and Districts

In 2012, Chardonnay accounted for the largest percentage of the total crush volume with 16.8 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 11.3 percent of the total crush. The next eight highest percentages of grapes crushed included wine and raisin grape varieties. Thompson Seedless, the leading raisin grape variety crushed for 2012, held 5.3 percent of the total.

District 13, (Madera, Fresno, Alpine, Mono, Inyo counties; and Kings and Tulare counties north of Nevada Avenue (Avenue 192)), had the largest share of the state's crush, at 1,462,119 tons. The average price per ton in District 13 was \$369.40.

* Synonyms for variety names of the Grape Crush Report for crop year 2012.

Livestock and Dairy

California's total livestock and livestock products cash receipts were \$12.2 billion in 2012, down 2 percent from 2011. The decline in dairy receipts was the principle contributor to the dip in total livestock receipts. Livestock and poultry account for nearly 27 percent of the state's gross cash receipts. Accounting for 7.1 percent of total US livestock cash receipts, California ranked third behind Iowa and Texas. Dairy products remained the state's leading commodity and accounted for 18.6 percent of receipts for US dairy products or 4.5 percent more than Wisconsin. California ranked 7th nationally in cash receipts for cattle and calves as well as poultry in 2012. The state ranked 6th nationally in terms of aquaculture receipts.

For the first two quarters of 2012 the Golden State's dairy industry saw prices received for milk drop nearly as sharply as they had recovered in 2011. Milk prices bottomed in May at prices not seen since the summer of 2010. The last half of the year saw milk prices recover to a high all milk price of \$19.90 per hundredweight. Slowing milk production growth nationwide and reduced production in the state contributed to the increase in dairy product prices in the latter portion of the year. The drought in the Midwest and West negatively impacted feed

availability. Feed costs, according to the California Department of Agriculture (CDFA) annual cost of production survey, continued to increase throughout 2012. The fourth quarter feed costs were nearly 10 percent more than the corresponding quarter in 2011. In May and December CDFA held hearings on proposed modifications to the Stabilization and Marketing Plans for Market Milk. These resulted in amended whey valuation in the Class 4b formula and temporary Class 1, 2, 3, 4a and 4b pricing formula changes effective in the spring of 2013. The summer whey price adjustment nudged the prices received up to end the year higher than December 2011, but the annual average return per hundredweight was \$16.52 compared to the prior year's \$18.54.

Proposals to reform the dairy industry continued to be floated through the year on the national and state level to address the volatility in prices and supply management. The inability to pass the 2012 Farm Bill was temporarily mitigated by an extension of the 2008 Farm Bill dairy subsidies. In 2012 dairy processors lobbied for the Dairy Security Act, which instead of focusing on milk prices, addressed the margin between farm level milk prices and feed costs. Payments from the Federal Milk Income Loss Contract (MILC), which compensates dairy producers when domestic milk prices fall below a specific level, were available to producers for nine months of 2012 and ranged from \$0.02/cwt to \$1.63/cwt. EU regulations on allowable somatic cell counts were imposed on U.S. imports beginning in March of 2012. Dairy exports to the EU were down from the prior year, but there was a positive impact on U.S. milk quality. 2012's annual average Somatic Cell Count (SCC) was down 6 percent from the prior year, according to USDA's Animal and Plant Health Inspection Service (APHIS). Cooperatives Working Together (CWT) helped member cooperatives

Bee Colonies, Honey Production and Value, 2003-2012¹

Year	Bee Colonies	Yield Per Colony	Production	Average Price Per Unit ²	Value

2012	340	35	11,900	193.0	22,967

¹ Producers with five or more colonies. Colonies which produced honey in more than one State were counted in each State.

² Average price per unit based on expanded sales.

with export sales totaling 115.7 million pound of cheese and 71.5 million pounds of butter. Declining receipts and production, sluggish economic recovery, limited feed availability due to drought conditions in the nation's corn growing regions, shrinking margins and a pending Farm Bill were the focus of much of the activity in the dairy industry in 2012. The year also saw more dairies in foreclosure. Some dairies relocated to other states or shut down completely with a net loss of 105 California dairies in 2012, up from 48 in 2011 and similar to the 100 dairy drop in 2009.

The state's dairy industry continued to be subject to a myriad of environmental regulations in 2012 as air and water quality rules were implemented. The Central Valley Dairy Representative Monitoring Program (CVDRMP) continued to sign up members for its cost sharing program to monitor well water across nine counties. Additionally new dairy operations are under the auspices of the comprehensive California Environmental Quality Act (CEQA). Revisions to EPA regulations in 2012 will impact the industry in the near future. USDA's APHS traced California's first case of mad cow disease to a dairy in Tulare County. Investigations revealed the infected cow had a rare "atypical" case of the disease, meaning it arose spontaneously rather than through the feed supply.

Since 1993, when it surpassed Wisconsin in milk production, California has been the nation's leading dairy state. Sales of milk and cream contributed \$6.90 billion in 2012. Wisconsin, Idaho, New York, Pennsylvania and Idaho were the next leading states in total milk production. The top five dairy states accounted for nearly 52 percent of the total US dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter and nonfat dry milk. California was second in total cheese production behind Wisconsin. Though the difference in total cheese production between these two states was decreasing in recent years, this was not the case in 2012. California ranked 4th nationally in milk produced per cow per year

in 2011, but dropped down to 6th in 2012, behind Colorado and Michigan.

California's dairies produced 41.8 billion pounds of milk, accounting for nearly 21 percent of the nation's milk supply. For the sixth year in a row, all 12 months of the year recorded more than 3.1 billion pounds in milk production. California milk utilization experienced declines in fluid and frozen products and increases in cheese and soft products (e.g., cottage cheese, yogurt, and sour cream). California milk going into cheese production comprised 43.5 percent of the state's total production. Mozzarella continued to account for the bulk of California cheese production, comprising over 58 percent of the cheese produced in the state in 2012.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-producing counties in California accounting for over 72 percent of the state's total milk production were Tulare (27 percent), Merced (15 percent), Kings (10 percent), Stanislaus (10 percent) and Kern (10 percent). Similar to last year, sales of fluid milk in California averaged 29 percent whole milk, 39 percent reduced fat milk, 14 percent low fat milk, 15 percent skim milk and 3 percent half-and-half.

Milk production per cow for 2012 was 23,457 pounds, essentially unchanged from 2011's 23,438 pounds per cow. California's total cheese production of 2.25 billion pounds was down less than 0.1 percent from 2011. United States cheese exports increased nearly 16 percent from 2011 to 285 thousand tons per the USDA Foreign Agricultural Service (FAS). Butter exports decreased by 23 percent to 49 thousand metric tons. Nonfat dry milk powder exports increased by 2 percent to 490 thousand tons. Exports of whey products increased by over 5 percent to 558 thousand tons. Recent U.S. dairy inroads into Asian markets eroded in 2012 with East Asian imports of US dairy products down 37 percent and those to Asia-Oceania down 49 percent. Competition from Australia and New Zealand, coupled with economic factors, hindered U.S. suppliers ability to take advantage of the burgeoning Asian market demand for dairy products. Total US dairy product

Source of Income	California Livestock, Dairy, Poultry, and Apiary Cash Income, 2011-2012 ¹

Total	12,359,840	12,357,994	-2

¹ 2011 and 2012 sheep and lambs included in other livestock.

exports were up nearly 4 percent at 1,979 thousand tons.

California cash receipts for cattle and calves increased over 16 percent from 2011. Sales totaled \$3.30 billion, compared with \$2.87 billion in 2011. Receipts for hogs and pigs were down 1.3 percent from the previous year. Aquaculture receipts were down nearly 7.5 percent from 2011.

California's 2012 honey production, at 11.9 million pounds, was down 33 percent from the prior year. Producing colonies totaled 340 thousand, down 8 percent from 2011. The yield per colony averaged 35 pounds, compared to 48 pounds produced in 2011 and 67 pounds in 2010. The average price received for honey was \$1.93 per pound. Though average price per pound was up 28 cents from 2011, the low production pushed cash receipts for honey down 8 percent from 2011's total.

After several years of high prices, sheep ranchers saw the price of lamb in 2012 plummet to levels not seen since 1986. The state's poultry sector continued to be concerned with food safety and stagnant domestic consumption. Impacts from the 2008 Prevention of Farm Animal Cruelty Act to be implemented in 2015 are not yet apparent as there has not been a significant decline in egg production since the act was passed. Due to the Midwest drought, feed costs for the poultry industry were elevated in 2012.

¹ An operation is any place having one or more head of milk cows, excluding cows used to nurse calves, on hand at any time during the year.

Percent of inventory reflect average distributions of various surveys conducted during the year.

² Data will only be published during the Census of Agriculture which is conducted in five-year intervals.

2012	105	64	203	247	6	14	105

¹ For feeding or breeding, excludes stock brought in for immediate slaughter. Inshipment ratios for 2006 and 2007 revised based on new California Department of Food and Agriculture data.

² Includes custom slaughter for use on farms where produced and state out-shipments, but excludes inter-farm sales.

³ Excludes custom slaughter for farmers at commercial establishments.

Goats by Class as of January 1, 2005-2013 ¹

Year	Angora Goats	Milk Goats <i>Head</i>	Meat and Other Goats
2005	3,000	38,000	75,000
2006	3,000	40,000	85,000
2007	3,500	37,000	95,000
2008	4,000	36,000	89,000
2009	4,000	37,000	95,000
2010	3,500	38,000	93,000
2011	3,500	38,000	100,000
2012	3,500	41,000	96,500
2013	3,500	40,500	98,500

¹ Initiated in 2005.

Grazing Fee Annual Average Rates, 2003-2012 ¹

Year	Per Animal Unit ²	Cow-Calf <i>Dollars Per Month</i>	Per Head
2003	13.50	17.50	14.30
2004	14.50	19.50	15.50
2005	15.40	20.50	17.00
2006	16.50	21.00	17.00
2007	16.50	21.50	17.30
2008	17.80	22.10	18.50
2009	16.70	21.00	17.50
2010	16.40	20.50	17.00
2011	17.30	21.50	18.20
2012	19.40	23.00	20.00

¹ The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

² Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833).

¹ Live weight; adjustments made for changes in inventory and for in-shipments.

² Live weight; excludes custom slaughter for use on farms where produced and inter-farm sales within the state.

³ Receipts from marketing and sale of farm slaughter.

⁴ Livestock total does not include sheep and lambs after 2010.

⁵ Cattle and calf annual average value not published beginning 2012.

⁶ Hog and pig annual average value not published beginning 2012.

¹ Preliminary 2012 data.

² Excludes processed cheese and cottage cheese.

³ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

⁴ Includes all cheeses not included in the above categories.

⁵ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

⁶ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

⁷ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink." Contains less than 10 percent milk-fat required for ice cream.

⁸ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

Vegetable and Melon Crops

California continued as the leading fresh market vegetable producing state in 2012, accounting for 44 percent of the U.S. harvested area, 48 percent of the national production, and 50 percent of the value, for the 24 selected vegetables and melons estimated.

Fresh market production increased for artichokes, broccoli, carrots, celery, garlic, leaf lettuce, watermelon, agaricus mushrooms, spring onions, summer storage onions, summer non-storage onions, bell and chili peppers, pumpkin, and squash. Fresh vegetable crops with decreased production included, asparagus, snap beans, cabbage, cauliflower, sweet corn, cucumbers, head and romaine lettuce, cantaloupes, honeydew, processing onions, spinach, and fresh tomatoes.

California also led the nation in processing vegetable production during 2012, with 25 percent of the U.S. harvested acreage, 70 percent of the national production and 51 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2012 fresh and processing vegetable and melon production was \$6.8 billion, down from 2011's revised total of \$7.2 billion. Lettuce remained the leading vegetable crop in value of production, at \$1.4 billion, followed by tomatoes with \$1.2 billion.

Vegetable crops that had value increases were artichokes, broccoli, cabbage, sweet corn, cucumbers, leaf lettuce, cantaloupes, agaricus mushrooms, summer storage onions, processing onions, summer non storage onions, bell and chili peppers, pumpkin, fresh spinach and squash. Crops that had decreased value included asparagus, snap beans, carrots, cauliflower, celery, garlic, head and romaine lettuce, honeydew, watermelon, spring onions, processing spinach, and fresh tomatoes.

According to the USDA Economic Research Service, per capita use of vegetables, potatoes, sweet potatoes, pulse crops and mushrooms in the United States increased from 390 pounds in 2011 to 402 pounds in 2012. Per capita use for melons was not reported in 2012.

Fresh market consumption per capita in 2012, without melons, was 146 pounds, 2 percent higher than in 2011. Utilization increased for asparagus, broccoli, carrots, sweet corn, cucumbers, eggplant, onions, bell peppers, pumpkins, and squash. Declining utilization was observed for artichokes, cabbage, cauliflower, escarole and endives, lettuce, spinach, and honeydew melon. Snap beans, celery, garlic, radishes, southern greens, and tomatoes had unchanged utilization.

Per capita consumption of U.S. processing vegetables increased 2 percent from 113 pounds in 2011 to 115 pounds in 2012. Processing vegetables whose utilization increased in 2012 included snap beans, sweet corn, green peas, processed cucumbers, processing tomatoes, processed cabbage, chili peppers, dehydrated onion, and green lima beans. Consumption decreased for processed spinach. Canned beets utilization remained unchanged.

Notable Increases in Production:

Chili Peppers	39%
Artichokes	13%
Broccoli.....	13%
Pumpkins.....	12%
Bell Peppers	11%

Notable Decreases in Production:

Processed Spinach.....	22%
Fresh Spinach.....	16%
Fresh Cabbage.....	14%
Fresh Tomatoes	14%
Head Lettuce	14%

¹ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

² Includes both fresh marketing and processing vegetables.

³ 2011 and 2012 were not published to avoid disclosing data for individual farms.

⁴ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 2003 to 2009 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.

⁵ Included in summer storage onions.

⁶ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc.

¹ Prices are for fresh market vegetables at point of first sale.

California Agricultural Exports

In 2012, California agricultural exports reached \$18.18 billion, representing a 8 percent increase over the previous year. As indicated by the table below, California's agricultural exports have grown at an impressive pace for the past 10 years except for a slight contraction between 2008 and 2009.

California Agricultural Export Values, 2002-2012

Year	Export Value in \$Billions
2012	\$18.18
2011	\$16.77*
2010	\$14.75*
2009	\$12.44
2008	\$12.90
2007	\$11.17
2006	\$9.82
2005	\$9.37
2004	\$8.24
2003	\$7.50
2002	\$6.55

*Note: the total export value for 2010 and 2011 was revised upward slightly from previously published totals due to availability of improved data on production.

Exports of almonds continued to be the top commodity from California, with a value of \$3.39 billion in foreign sales. Dairy and dairy products ranked second to almonds with a California total export value of \$1.31 billion, a one percent decrease over 2011.

The leading 57 export commodities accounted for \$15.77 billion, or 87 percent of total agricultural exports, while the remaining 13 percent of exports were associated with "other products and mixtures." Of the top 57 commodities, 30 experienced an increase in export value of 5 percent or greater.

California's share of total U. S. agricultural exports for 2012 was 12.9 percent or slightly more than the 12.3 percent share reported last year. California's top 10 export destinations—Canada, European Union, China/Hong Kong, Japan, Mexico, South Korea, India, United Arab Emirates, Turkey, and Taiwan, accounted for 69 percent of the 2012 export value. Export values to China and Taiwan grew 20 percent or more as compared to 2011.

Methodology

Data to compute agricultural exports are derived from official government sources, published industry sources, and unpublished information from the government and the industry. Export quantities and values of the whole U.S. and California port districts are from the Department of Commerce (DOC) trade data posted on the United States International Trade Commission (USITC) online database (<http://dataweb.usitc.gov/>). Canadian import (value) data are from Strategis Canada's online database (<http://strategis.ic.gc.ca/engdoc/main.html>). If the California export price is not available for a particular product, we use the U.S. average export price for that commodity in order to provide a dollar value for exports.

Production quantities and values are from various National Agricultural Statistics Service (NASS), Economic Research Service (ERS), and Agricultural Marketing Service (AMS) publications. A share of the raw data provided in these USDA service publications are released as a preliminary report early in the calendar year followed by a more accurate final report released at a later date. For accuracy, The University of California Agricultural Issues Center (AIC) export estimates use data from final USDA reports. Due to the US budget sequestration in 2013 a final report of production quantities and values of non-citrus fruits and nuts was not released. Estimates of 2012 California exports of non-citrus fruit and nuts were calculated using preliminary crop data.

AIC exports estimates use different methods from other sources, such as ERS. The ERS estimates are based on a state's national share of production of the exported commodity. The ERS method assumes that,

for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use geographic port data, without direct links to where the product originated. The AIC export figures correspond to commodities that have been produced on farms and ranches within California. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, AIC reports exports at the individual commodity level. For instance, exports of a given fruit in fresh, canned, and dried forms are summed and listed under the name of the fruit, although the method for fresh fruit exports may differ from the method used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

California Agricultural Product Export Values and Rankings, 2010-2012

2012 Rank	Product	2010	2011	2012	Change in Value 2011 to 2012 (In Percent) ¹

¹ Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

² Export values for 2011 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Export values for 2010 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

⁴ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁵ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁶ "Total Principal Commodity" values for 2010 and 2011 were revised based on updates to USDA NASS production data.

⁷ "Total Other Products and Mixtures" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; (b) categories for which the listed item does not provide data on individual commodities and (c) animal and plant products marketed in such small quantities that they are not included in the top 57 leading commodities.

Source: University of California Agricultural Issues Center.

¹ Export values were revised for 2011 based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

² "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

³ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁴ Total "Other Products and Mixtures" is equal to "Total US Agricultural Exports" minus "Total Principal Commodity Exports."

⁵ "Total US Agricultural Export" values come from USDA. USDA defines agriculture to include: live animals, meat, and products of livestock, poultry, and dairy and products; hides and skins (but not leather products); animal fats and greases; food and feed grains and grain products; oilseeds and oilseed products; fruits, nuts, and vegetables and products of these; juices, wine, and malt beverages (not distilled spirits); essential oils; planting seeds; raw cotton, wool, and other fibers (not manufactured products of these); unmanufactured tobacco (not manufactured tobacco products); sugar and sugar products; coffee, cocoa, tea, and products of these; rubber and allied products; and stock for nurseries and greenhouses, spices, and crude or natural drugs. Fish, shellfish, and forestry products are not included in "agriculture."

¹ This table shows destinations that receive shares of total exports greater than or equal to 5 percent of each commodity in either 2011 or 2012 for which reliable data are available. The numbers in parentheses correspond to the 2012 ranking in Table 1 "Agricultural Commodity Export Values and Rankings, 2010-2012."

² Accurate export destination data are only available for 50 of the top 57 commodities. The commodities where export destinations are not included are apples, chickens, eggs, mushrooms, seeds for sowing, turkey and wheat.

³ "Hides and Skins" are included in the heading "Beef and Products."

⁴ Values were revised for 2011 based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

⁵ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁶ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

¹ This table provides the total export value and export values for individual commodities to the top 15 destinations. Only commodities with export values greater than \$2 million to the destination are reported.

² Values were revised for 2011 based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁴ "Hides and Skins" are included in the heading "Beef and Products."

⁵ In 2012 Russia replaced Indonesia in the top 15 export destinations.

¹ The EU-27 members to which California exports are shipped reflect only the initial destination of the product, not the EU country of consumption. Many products are distributed throughout the EU after the initial entry.

² "Other Commodities" are those that individually account for less than \$100 million in export value to the EU.

³ Accurate export destination data is only available for 50 of the top 57 commodities. The commodities where export destinations are not included are apples, chickens, eggs, mushrooms, seeds for sowing, turkey and wheat. Totals may not equal due to rounding.

⁴ The other 17 EU members include Austria, Bulgaria, Cyprus, Czech Republic, Estonia, Finland, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Romania, Slovak Republic, and Slovenia. All these countries combined account for just over 5 percent of California agricultural exports to the EU.

Source: University of California Agricultural Issues Center.

¹ Export quantities of processed goods were converted to farm fresh quantities using conversion factors published by USDA ERS (<http://www.ers.usda.gov/publications/ah697/>) or annual conversion factors published by USDA NASS in annual crop summaries.

² Values for 2011 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Farm quantity exported for "Dairy and Products" and products is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents.

⁴ There is no addition for the farm quantity of milk allocated to whey exports because whey is a by-product from cheese production. Other "Dairy and Products" including casein, lactose, milk albumin, products for infant use, pudding, and rennet are converted to farm equivalent by multiplying California's share of U.S. milk production to the U.S. export quantity for these products, then applying a conversion factor of 1 pound of product to 8 pounds of milk equivalent. The same conversion factor is used for nonfat dry milk.

⁵ "Grapes, All" includes grape juice, raisins, table grapes, and wine.

⁶ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁷ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁸ The weighted average is based on each of the 53 commodity's share of production value. Values for chickens, flowers and nursery products, mushrooms and seeds for sowing are not included because reliable data on export quantity is not available.
